# MOUNTING FERTILITY ISSUES AFTER 'VACCINES'

by **Charlene Muhammad**  
National Correspondent  
[@sischarlene](#)

*“And they know they have a genocidal plot against all Black America, starting with Nixon and Kissinger, and ‘Memorandum 200.’ Go look it up. They want to cull the population of our planet by two billion people! This is not human, this is Satanic!”*

*—The Honorable Minister Louis Farrakhan  
November 16, 2017, Watergate Hotel*

Mounting evidence is documenting how mRNA-technology-based “vaccines” are causing reproductive and pregnancy problems in women who have taken the COVID shots or unvaccinated women who have had intercourse with vaccinated partners.

Israel was proud to make its population the guinea pig for Pfizer, key manufacturer of the dangerous “vaccines.” It mandated the injections, but now Orthodox Jewish women, in their careful and meticulous efforts to repopulate, have noticed changes in their menstrual cycles. A multi-part online series focusing on the vaccines’ impact on fertility, reproduction, women’s health, and newborns in Israel, by investigative journalist Etana Hecht titled, “Covid Vaccines Affect Jewish Marriages,” found that vaccinated men could impact their partners or potential fetuses after vaccination. “What was not known then due to an overt blackout of data from Pfizer and the FDA was that in trials, male

participants were instructed to refrain from intercourse or sperm donation for a period of time after vaccination. If they were to be intimate with a woman, the trial rules required two forms of birth control,” wrote Ms. Hecht.

Ms. Hecht reported the Jewish Orthodox community noticed the impact almost immediately after the vaccine rollout. Because of the sacred role of the *mikveh* (ritual bath) in marital life, this community was alerted early to menstrual suffering among its vaccinated women, and advocates in that community have been raising alarms about a dramatic drop in birthrates—from five or six a week to one or two a month—as well as reports of a wave of births in which babies were missing a hand or a foot, documented Ms. Hecht.

Disturbing trends reported also include excessively heavy or painful periods, missed periods, excessively long spotting, and periods returning post-menopause. In Dec. 2022, a Rabbi and community leader of a Hasidic sect in New York reported that the average number of births seen in Hasidic communities in New York has been cut in half, from a consistent greater than 20 births per week pre-“Covid vaccine” across various communities, to a definitive sharp decline to greater than 10 births per week, beginning in 2021, Ms. Hecht reported. Further, a local funeral chapel manager reported that while they rarely used to get stillbirth cases, they now

get multiple stillbirth babies per month.

Dr. Christina Parks, Cellular and Molecular Biologist, said she finds the reproductive issues stemming from the injections “extremely, extremely concerning and a depopulation event.”

As a molecular biologist we always knew the mRNA “gene therapy” would integrate into people’s DNA, said Dr. Parks in a recent interview with members of the Nation of Islam Research Group. “Since this localizes to the ovary, I would expect that this is getting into our genomic DNA, definitely the eggs, and most likely the sperm as well. So, this is altering the genetic makeup of our children,” stated Dr. Parks.

“If it gets into the DNA of one’s arm cells, the immune system will probably destroy it,” she continued.

“But when you’re creating a whole new individual, most likely it’s going to miscarry. It’s not going to go anywhere, but we don’t know. This is uncharted territory. This is why it is so, so deeply unethical, because we knew that this could happen,” added Dr. Parks.

Dr. James Thorp, a Board-Certified Obstetrician Gynecologist and Maternal Fetal Medicine Physician with over 43 years of obstetrical experience, said that “The long and short of the irrefutable data, because it comes from Pfizer’s own internal documents, is that of 270 pregnant women given the vaccine, 238 of them weren’t

Continued from page 8

even followed up,” stated Dr. Thorp. “The ones that were followed up, almost all of them had severe complications. In fact, 46 percent of the pregnant women that received those vaccines had significant complications,” he said. “This is asymmetric warfare. This is fifth-generation warfare. This is disinformation warfare.”

It is critical to note that Pfizer chairman and CEO Dr. Albert Bourla is a Doctor of Veterinary Medicine and holds a Ph.D. in Biotechnology of Reproduction, a perfect knowledge base for developing an anti-fertility depopulation drug.

In a recent study they performed Dr. Thorp and colleagues found an almost 1,200-fold greater risk of severe menstrual abnormalities with the COVID-19 vaccine, compared with the influenza vaccine. “Now, the CDC and the FDA said if you have a danger signal that is two-fold or greater, that is dangerous. We didn’t find two-fold or greater. We’re looking at 50-fold or greater! One-hundred-fold, 1,000-fold or greater on some of these complications,” stated Dr. Thorp. Among the many complications, detailed in Dr. Thorp’s study:

- a 57-fold increase in miscarriages,
- severe fetal heart problems,
- significant increase in fetal growth slowing and abnormal growth of the baby inside the womb because of abnormal placenta,
- severe preeclampsia (high blood pressure),
- preterm premature rupture of membranes,
- pre-term labor,
- severe reduction in amniotic fluid,
- fetal death.

It is now well-known that Pfizer and the FDA conspired to try to conceal these actual facts for 75 years, but a group of scientists and medical researchers, represented by Attorney Aaron Siri of Siri & Glimstad, successfully sued the FDA under the Freedom of Information Act (FOIA) to force the release of documents related to the licensing of the Pfizer “vaccine.”

Meanwhile, whistleblower Postpartum Nurse Michelle Gershman, who works at a trauma center in Central California, said that

before the COVID vaccines, “moms were delivering their babies, who seemed pretty healthy.” Their neonatal intensive care unit (NICU) usually had approximately 50 babies, but all of a sudden in March 2021—after the COVID vaccine roll-out—that number spiked to 80, Ms.

Gershman told producer/host Del Bigtree on the weekly news show thehighwire.com in a recent interview.

In April, she noticed a rise in fetal deaths between 30 and 33 weeks of pregnancy, she stated. A fetal death means a dead baby is found on an ultrasound at 20 weeks or after, and any found at 19 weeks and six days technically is classified as a miscarriage, Dr. Thorp told The Final Call.

“I was blown away by what I was seeing, the health problems that I was all of a sudden seeing in the mothers,” said Ms. Gershman. “This is not natural. This shouldn’t be happening,” she said.

According to Ms. Gershman, her institution saw usually 1-2 fetal deaths every 2-3 months, which is consistent with the national average, according to Dr. Thorp. However, that number had risen to 22 in July 2021, and matched that same level in August 2022, he stated.

“What the nurse (administrator) said was there were probably more than 22 fetal deaths, but these are only the ones that went to labor and delivery,” stated Dr. Thorp. “[T]hat equates to a rate of 29.3 when the number should be 5.7 or 5.8 ... That doesn’t sound like a huge

‘Dr. Thorp and his colleagues advise a worldwide moratorium on the use of COVID-19 vaccines in pregnancy until randomized prospective trials document safety in pregnancy and long-term follow-up in offspring.’

rise or increase to you, but let me tell you something, it’s astronomical because the amount of variation is extremely small ... That’s a one-in-a-million-year event. That can’t be explained by chance alone ... Clearly, the only thing that changed here was the vaccination and the aggressiveness of the vaccine program,” said Dr. Thorp.

The ones that went to the E.R. or to the operating room, or went to another facility, or delivered at home and were taken care of by a midwife, those weren’t even included, and Ms. Gershman said there are probably many more pregnancy losses.

Dr. Thorp and his colleagues advise a worldwide moratorium on the use of COVID-19 vaccines in pregnancy until randomized prospective trials document safety in pregnancy and long-term follow-up in offspring.

“This is a smoking gun! ... This genetic ‘therapy’ is killing patients all over the world and these people [government officials] are still pushing it,” said Dr. Thorp.

# The Nation of Islam Research Group Interviews Dr. Syed Haider, Part II

Dr. Syed Haider

*Dr. Syed Haider is board certified in Internal Medicine with additional training in Functional Medicine. He has extensive experience working in hospitals, clinics, communities, and online. He has helped over 25,000 patients and has provided treatments for COVID-19, including Ivermectin—a highly effective drug the government has attempted to suppress. Dr. Haider provides professional physician services online. See Part I of this interview in Final Call Vol. 42 No. 20.*

*Dr. Haider began with the following opening remarks from a Hadith of Prophet Muhammad (Peace and Blessings of Allah Be Upon Him): “Every disease has a cure.” This is the axiomatic basis of Islamic medicine, and really all medicine, that we have to start with: that if there is a disease, there is a cure; and traditional cultures believed that the cure was there. It’s not like it [the cure] was something coming in the future, but they could find it in their surroundings with herbs or plants.”*

## **Dr. Haider on Censorship, the DOD and Covid Booster Shots**

“There were a lot of voices that were silenced. And we were not allowed to have a national debate on this [COVID ‘vaccine’]. There was heavy censorship. And so I think we could have saved a lot of people’s lives and prevented a lot of chronic disease. There’s going to very likely be a deluge of severe chronic disease from the five or six billion shots that have been given around the world against this virus. And it’s extremely unfortunate because a lot of people just trusted the people in charge to have their best interests at heart and they didn’t really do any research at all. Even highly intelligent people, even people who are physicians, working at a very high level,

simply trusted the people in charge to have done the work; and, at this point, it seems that this entire thing may have been kind of spearheaded by the U.S. Department of Defense (DoD)... It [the whole FDA approval process] was all a charade.

“[Former pharma and medical device R&D executive] Sasha Latypova made a few Freedom of Information Act (FOIA) requests, and she’s shown that the informed consent was waived, *legally*, during this pandemic, and these shots were really military countermeasures. They weren’t actually considered to be medical therapies and they didn’t really need to have trials run—they could just decide to release it. And so that’s the legal framework under which these shots were rolled out. So the groups around the country that are in charge of our medicine and our medical response to situations were not the primary drivers of rolling out the shots. The Department of Defense has always been in charge...

“So if anyone could have gotten the message or if they get the message now, it’s not too late: *Just stop taking boosters*. So we have to tell people, and more and more people are becoming convinced of this. It’s great that some of the restrictions on our speech have been lifted at Twitter. I still have my reservations, obviously, about that, because speech on Twitter may look like it’s free speech, but it’s easy to put people into little echo chambers and limit the spread of their ideas. But, regardless, whatever we can do to convince more and more people, I think we need to do because each shot worsens the situation and the negative effects—perhaps they wear off after three months or six months or a year. And there are things that you can do to detox or to eliminate the inflammation caused by the shots. But the most important thing is just to stop taking them.”

## **Dr. Haider on Big Pharma**

“[The big pharmaceutical manufacturers] are driven by this kind of profit motive where they have to continue growing at an exponential rate because they’re trying to keep up with inflation. So the fact that we print money and that we debase our currency, it drives all industry to the edge to try to keep up with that inflation that’s happening, to keep up with the debasement of the currency, by hook or by crook. And it’s oftentimes by crook. These companies have been proven to be crooks so I don’t see why anyone trusts them, when they’ve been sued and they’ve been fined billions of dollars.

“I think it was in 2009: Pfizer paid a \$2 billion [settlement to resolve civil claims and criminal charges concerning multiple drugs]. So you wouldn’t trust them. You wouldn’t give them your daughter’s hand in marriage. You wouldn’t give it [your trust] to somebody with that kind of background or that kind of record. And yet we trust these people with our lives and our health.”

## **Dr. Haider’s Final Message**

“The final message I want to give people is what I started with, which is from the prophetic tradition that every disease has a cure. And this is found not only in the Islamic tradition, but it’s also the same concept that’s found in the Jewish and the Christian traditions. So three great monotheistic faiths agree on this axiomatic point of medicine. And so this is the basis of any true medical tradition—this belief that you can be cured. And so, especially people who have ‘long COVID’ or who have gotten the vaccine, it’s very important what you choose to believe. I’ve seen people cured from seemingly incurable diseases, including ‘long COVID,’ vaccine injuries, cancers and end-stage cancers, diabetes, high blood pressure—anything. But I’ve never seen anyone cured who didn’t believe that it could happen. So number one, you have to believe it. And it’s rooted in your faith if you’re Muslim, or from one of these three great traditions. And if you don’t already believe that, you need to get that belief from somewhere, and get it from somebody else if you have to.

“But the sign of a true healer is that they can help you to strengthen that or instill it from scratch, if you don’t have it already. They can instill this belief into you. They can give you the certainty. They can transmit that certainty from their heart to yours, when you meet them and talk to them. So that’s number one. You have to have that certainty. And then, anything is possible from there. A lot of human health really depends on what we believe. So that’s really where it starts. And then you can go from there. Ivermectin is extremely beneficial. There are things like fasting, cold therapy—cold exposure or cold. A cold plunge, or you jump into an ice bath, is very healing for this and also a good practice just in general, along with fasting.

“The prayer itself—the five daily prayers are extremely important for maintaining health. It’s not just spiritual health, but it’s also what we would call a meditative movement, like yoga, Qigong, tai chi. This is the Islamic meditative movement that you do five times a day, and the long COVID and vaccine injuries and really all chronic disease are deeply linked to this autonomic nervous system dysfunction, where the sympathetic nervous system is in overdrive and the rest-and-digest part of the nervous system is not getting enough exercise, is not strong enough. And our chronic milieu, our modern environment is heavily geared towards stimulating the sympathetic nervous system [to function] like a go, go, go, type A personality, [to] do things all the time, constantly be busy, never rest. And so you have to have something built into your day that helps you reset your nervous system and calm down and relax and there’s really a lot [you can do]. It’s hard to explain to people how important the lifestyle elements are, including things

like prayer, and fasting, and cold exposure. They’re actually more effective than the pharmaceuticals that people assume to be stronger and more likely to help them.

“A healthy diet, maintaining healthy weight—and getting sunlight every day is very important for more than just vitamin D. It raises serotonin levels, it stimulates mitochondria, it improves vascular health. The list is probably endless, but the things we know about sunlight are far more than just vitamin D and stimulating melatonin and helping you sleep. It’s extremely important. That and maintaining healthy relationships and friendships are very important for your health.

“If you want more information, it’s available online. My website is mygotodoc.com. We have a free protocol for people who are struggling with especially ‘long COVID’ and vaccine injuries, and people can register for free and get free health care advice.”

**Nation of Islam Research Group:** Thank you, Dr. Haider, and As-Salaam Alaikum.

**Dr. Haider:** You’re welcome and Wa-Alaikum Salaam.
